NOTES

Thames Water Utilities Ltd has provided an extract from their DGS Register for the study area. Due to data protection requirements the data has not been provided at individual property level; rather the register comprises the number of properties within 4 digit postcode areas that have experienced flooding either internally or externally within the last 10 - 20 years. For the purpose of this study, records for the last 10 years have been used.

It should be noted that records only appear on the DGS Register where they have been reported to TWU, and as such they may not include all instances of sewer flooding.

Furthermore given that TWU target these areas for maintenance and improvements, areas that have experienced flooding in the past may no longer be at greatest risk of flooding in the future.

This map is intended to provide a strategic overview of areas at risk of sewer flooding and should not be used to assess flood risk for individual properties.

DISCLAIMER This document has been prepared in accordance with the scope of AECOM's appointment with its client and is subject to the terms of that appointment.
